Rocker bins for forklifts

ROCKER BINS...

Rocker bins can do more with your forklifts! Our rocker bins are designed for fast and efficient handling of goods. They are well balanced, both empty and loaded, and the forks slide easily yet securely into the \"shoes\" of the bins. It is their unique tipping ability, however, which will be of the greatest value for fast dumping and unloading. The emptied bin rocks back into its original position by the backward tilt of the forks.?

These robust bins are available in a variety of sizes and may also be fitted with lids and with wheels and castors for easy maneuverability, as well as a multitude of other accessories and attachments for the endless number of applications, which range from handling of aggregates, stone, sand, brick waste, cement, steel off-cuts, manufactured components and factory waste, to fruit, foodstuffs and liquid.
