

Double row disc ridger

FDKR-2

Fieldking Disc Ridgers are tractor-mounted implements engineered for efficient ridge and furrow preparation on row-planted crops such as potatoes, sugarcane, bananas, vegetables and more. These disc ridgers are used after ploughing to cut and turn soil, forming uniform ridges that enhance water flow, seedbed quality, and crop establishment. The FDKR-2 is A heavier, our-disc version designed for larger tractors in the 70–90 HP range with greater soil engagement and ridge formation capacity. The FDKR-2's additional discs and robust construction deliver deeper, well-defined ridges on larger acreage or tougher soil conditions.

Specs

General	
Axle Type	Spindle
No. of Discs	4
Type of Discs	Notched or Plain Disc
Disc Diameter	660mm x 6mm
Max Width Between Ridges	1000mm
Ridge Height	330mm
Bearing Hubs	4
Weight	435kg
Tractor Power	70-90HP
